

Feasibility Studies

A feasibility study evaluates the viability of your proposed idea. It's an invaluable part of the process, highlighting any practical or planning issues, ensuring your project is achievable and affordable.

A typical feasibility study can include;

- ① Purchase of a location plan that includes the area, either as a PDF drawing or a basic CAD drawing.
- ② A meeting lasting approximately 1.5 hours with the client to understand the parameters of the proposal.
- ③ Visit to the location to take photographs and undertake a very basic survey so the scale of the project can be ascertained, in terms of internal floor area - both existing and proposed.
- ④ A written report that includes sketch proposals for the development (see opposite) to give all concerned a visual model of the proposal. Initial feasibility studies include just a 3D view or a floor plan; others may include floor plans, a principle elevation, and sections where appropriate.
- ⑤ A written report that includes an estimated range of the possible costs involved in the proposal based on floor area, list of jobs, difficulty and uniqueness of construction. Any unusual risks associated with the proposal will be highlighted at this stage.

An example of the sketches provided as part of an 'Initial Design & Feasibility Study' into a new house, showing sketch floor plans, 3D view and principle elevation.

Initial consultations start from £250
